This promotional document is for health care professionals only.

PR-11251

One connection. Complete control.

Doing more with less just got a lot easier – and a lot better – thanks to ORTHO CONNECT™ middleware.

Get connected to a more efficient lab.

ORTHO CONNECT is a middleware solution that acts as a link between your ORTHO instruments and the lab information system (LIS), bringing everything to your fingertips to help streamline operations and maximize resources. Here's how:

Customize to meet your requirements:

- Choose from more than 40 rules to meet the specific demands of your lab
- Tailor the test types that are routinely performed based on the needs of your patients
- Define reflex testing rules for those results that require additional testing
- Configure your workflow process and approval levels to meet your needs

Connect when and where you need:

- Log on from wherever you choose to review results in real time
- Manage final medical approvals for multiple instruments at multiple facilities from one terminal
- Connect multiple instruments to a single LIS connection

Enhance quality control and safety:

- Automate results validation and Quality Control (QC) testing based on predetermined rules
- Eliminate the inherent risks of manual procedures
- Use image views for validation*
- Document activity for an audit trail
- Standardize results and performance reports
